

ST06 Swin input recipe sensitivity

Candidate v0.1 • page 1 • 2 rows • not inserted in manuscript

Dataset	Paired contexts	Input Δ BA (pp)	95% paired CI (pp)	Holm p (two pairs)
ISIC2019	15	1.960	[1.165, 3.226]	0.1250
MURA	15	-0.077	[-0.562, 0.500]	0.7500

Swin weight-evaluation recipe minus shared recipe, on the same 15 contexts per dataset. Existing paired nested intervals and conditional five-split sign-flip tests; the minimum two-sided exact p is 0.0625, and Holm adjusts two dataset comparisons.
