

RT01 Bootstrap scheme comparison

Candidate v0.1 • page 1 • 6 rows • not inserted in manuscript

| Stratum         | Adopted crossed q | Nested q | Split-only q | Original flat q |
|-----------------|-------------------|----------|--------------|-----------------|
| OrganAMNIST / A | 0.9088            | 0.9518   | 0.9912       | 0.9875          |
| OrganAMNIST / B | 0.7825            | 0.7723   | 0.8632       | 0.8284          |
| SIPaKMeD / A    | 0.8494            | 0.8688   | 0.8976       | 0.9616          |
| SIPaKMeD / B    | 0.5377            | 0.5346   | 0.5451       | 0.5748          |
| ISIC2019 / A    | 1.0000            | 1.0000   | 1.0000       | —               |
| MURA / A        | 0.7687            | 0.7824   | 0.8139       | —               |

Frequencies refer to the same reported full-grid reference model per stratum. Crossed is the adopted scheme; nested and split-only are sensitivities, flat is original replay. Original flat values are not available for the two new datasets.
