

RT03 Existing difference instability association

Candidate v0.1 • page 1 • 1 rows • not inserted in manuscript

Transformation	Odds ratio	95% existing interval	Analysis scope
One SD decrease in log10(context top-two BA difference + 1e-6)	2.022	[0.597, 5.763]	Four datasets, rule A, four CNNs; dataset-adjusted

The reported dataset-adjusted logistic association uses standardized negative log10 of the context-wise difference plus 1e-6. The interval contains 1. This is an existing supplementary association, not a causal or threshold estimate.
